

Think Cereals – Think ICC

Did you know...

The onset of cereals cultivation coincides with the start of human civilization.

There are over 15 different cereals and pseudocereals whereas wheat, maize and rice are the top 3 staple crops for over 4 billion people.

Around 50% of the world's daily caloric intake is based on cereal grain consumption.

Whole grain and high fibre grain-based foods are not only recommended in dietary guidelines worldwide but also provide added value for companies in the production chain from farm to fork.

The cereals industry is one of world's most important industries, with global production topping 2.5 billion tons, or more than 300 kg per person.

ICC – Trusted Since 1955

ICC is the preeminent international association in the field of cereal science and technology committed to international cooperation by disseminating knowledge, conducting research and developing standard methods. Its activities contribute to advance innovation, improve food, quality, food safety and food security for the health and well-being of all people.

About ICC

With cereal scientists and experts specialising in the milling of wheat and other cereals, bread making, and the production of other cereal-based foods from around the world ICC is:

- an independent, internationally recognized association
- an apolitical forum for all cereal scientists and technologists
- a publisher of international standard methods
- an organiser of major national and international events in the field
- a promoter of international cooperation on a global, regional and national level
- a significant player in the coordination and participation in international research projects.

ICC Activities

How is ICC involved in cereal science and technology?

- By organising international events and webinars on trending topics in the field
- By involvement in international research projects and networks
- By validating and standardising test methods
- By expanding and improving the efficient utilisation of cereals
- By promoting domestic and international trade
- By cooperating with other international organisations
- By supporting young cereal and food scientists and continuous professional development

 – A unique platform connecting cereal scientists and technologists around the world

ICC Membership

Country Membership

Institutional Membership

Corporate Membership

Individual Membership

Student Membership

Why become a member?

- Shape the future for cereal science at an international level
- Benefit from a pool of international experts in the field
- Get discounts for ICC events
- Participate in the ICC Working Groups
- Get free access to ICC webinars
- Have your own methods standardised/validated for international use
- Promote your company/institution in the ICC community
- Benefit from ICC publications
- Use the ICC career support
- Get exclusive member information

ICC Conferences & Events

ICC involves its members and partners in the organisation of major events and provides its services at a global level.

19th ICC Conference
Vienna, April 2019

5th Gluten-Free Symposium
Leuven, June 2019

International Cereal and Bread Congress
Since 1955

Dietary Fibre Conference
Since 2000

Latin American Cereal and Grain Conference
Since 2007

 – A renowned organiser and endorser of international conferences, symposia and workshops
